

# MINING

Total Eden Engineering, a leader in water management services, offers a range of capabilities to the mining sector. Recognising the unique position the mining sector it operates in, Total Eden are proud to offer tailor-made solutions to our mining clients' water needs.

Total Eden Engineering pride themselves on being able to provide total water solutions having extensive experience servicing remote mine sites, including but not limited to design and construction of:

- Mine dewatering systems
- Pump sizing and installations
- Dust suppression
- Pump stations
- Water purification
- Waste water management systems

Additionally, Total Eden Engineering provide a range of maintenance services to remote mine sites to allow our clients to achieve the optimum output from their water infrastructure while extending the assets life. Furthermore, our maintenance service allows our clients to mitigate the down time of any water asset in the event of a break down.
