

Weather Smart Irrigation Rebate

Receive up to \$200 towards weather smart irrigation

Weather smart irrigation uses local weather data to determine watering needs and adjust to the optimal sprinkler run time.

Water Corporation is offering a rebate of up to \$200 for the purchase and programming of eligible weather smart irrigation products.

Who can apply for the rebate?

You are eligible for the rebate if you are a Water Corporation customer in the Perth metro area, who has not previously claimed a rebate for an irrigation product.

Rebates will only be available on eligible products and services purchased between 1 September 2019 and 31 May 2020. You can claim once the product is operational at the property and programmed by a Waterwise Garden Irrigator.

Rebates are limited to 600, so get in quick!

Please read the full terms and conditions before purchasing a product at watercorporation.com.au/irrigationrebate

How to claim the rebate

1 Select a product

See the list of eligible products at the bottom of the page.

2 Purchase your product

Purchase from a retailer of your choice, just make sure you keep your receipt. We have a list of Waterwise Irrigation Design Shops in Perth that stock eligible products at watercorporation.com.au/irrigationrebate

3 Installation and programming

You'll need to have your product set up by a Waterwise Garden Irrigator - you can find a list on our website. Your irrigator will also need to complete the form on the back of this page for you.

4 Apply for the rebate

You will need three documents handy:

- Itemised receipts
- Completed form from your Waterwise Garden Irrigator
- A copy of your water bill

Then, fill out the form at watercorporation.com.au/irrigationrebate

Onsite weather station Yes No N/A _____

Weather-based functionality programmed[^] Yes No N/A _____
Required for rebate

Rain sensor Yes No N/A _____

Bore used for irrigation Yes No N/A _____

Set run-times appropriate for sprinkler type Yes No N/A _____

Check the following:

Advice to customer

Complete and supply controller card Yes No N/A _____

Master valve installed Yes No N/A _____

Confirm solenoid valves working correctly Yes No N/A _____

System split into hydrozones Yes No N/A _____

Sprinkler spacing/uniformity ok Yes No N/A _____

Matched precipitation nozzles Yes No N/A _____

Programmed correct watering days Yes No N/A _____

Was this a new install or replacement? If replacement, what was being replaced? Please use this section for any additional comments.

[^] For weather-based functionality the weather data source/s must be identified. A rain sensor shut off is not sufficient on its own.

I acknowledge that the irrigation consultation was carried out, work was completed to industry standards and I have programmed the product to make automatic adjustments based on appropriate local weather data.
